

**PX®-Ornikill** will kill those bacteria, fungi, protozoa, rickettsiales and viral organisms identified as being associated with diseases transferred by pest birds to humans and animals. The formulation will kill the organisms responsible for ornithosis and psittacosis. It will help protect workers who are involved in clean-up operations to remove bird droppings. Deposits considered to be prejudicial to health or a nuisance (defined as "statutory nuisances" under the Environmental Protection Act 1990 Part III) need to be suitably treated so as to obviate risks to other persons (or animals), who might be affected by contractors' activities.

#### DIRECTIONS FOR USE

**As a biocide on surfaces:** Use a 1:50 dilution of the product in clean water i.e. dilute 100ml with 5 litres of water and mop, wipe or spray over the surfaces using a 5 litre pneumatic sprayer fitted with a flat fan nozzle. This solution may be used on birds' landing, nesting, roosting areas as a preventative measure to protect workers operating on such surfaces.

**Removing bird droppings:** Use a 1:50 dilution of the product in clean water and spray over the droppings prior to the commencement of clean up operations. During the digging out operation spray the solution on to each fresh layer of droppings as it is exposed to keep down dust and kill organisms. Use 1:10 dilution to treat dead birds, collected nests and other such materials.

#### Treatment of contaminated materials:

- 1) Use a 1:50 dilution to wipe over the outer surfaces of re-useable PPE equipment eg. gloves, goggles, boots and to treat the outer surface of spray tanks.
- 2) Use a 1:50 dilution to treat implements eg. shovels, chutes and bins.
- 3) Treatment of sub-surfaces: At the end of a clean-up operation spray the exposed, cleaned surfaces with a 1:50 dilution of PX®-Ornikill.

#### APPLICATION NOTES

- Apply dilute solutions by mop, sprayer, cloth etc. When spraying aim to apply the solution until surfaces are thoroughly wetted but before run-off occurs.
- Dilute solutions should be freshly and accurately prepared in clean containers using clean water.
- The product can be diluted into trigger-sprays for use on all hard surfaces including glass work.
- The product is not aggressively corrosive to materials but care should be taken to prevent gross run-off from applications to building and other structured surfaces. Avoid run-off impinging on passers-by, vehicles, walkway surfaces, fabrics, other materials, ponds, gardens, etc.

#### USING THE DISPENSING CONTAINER

- 1) Remove both bottle caps and peel off completely the foil seals.
- 2) Replace both bottle caps.
- 3) Loosen the cap on the calibrated dispensing chamber.
- 4) Gently squeeze the 1 litre bottle to fill the chamber to the required volume, then release pressure on the bottle.
- 5) Remove the chamber cap and pour the measured liquid into the diluting vessel.
- 6) Repeat the procedure for multiple chamber-volume requirements.
- 7) After dispensing, replace and tighten the chamber cap.

#### HAZARD CLASSIFICATION / RISK PHRASES

Irritating to eyes and skin.

#### PRECAUTIONS

Wear gloves and eye protection when handling the concentrate.

DO NOT MIX with other chemicals.

Wash skin and eye splashes with water.

Store tightly closed in a safe place, out of reach of children.

Store between 0°C and 30°C in dry conditions, out of sunlight.

Protect from frost.

Harmful to fish. Do not contaminate ponds, waterways or ditches with chemical or used container.

Read safety data sheet before using the product.

# PX®-ORNİKILL

**CONTAINS CHLORHEXIDINE (6% w/w) & QAC (8% w/w)**

The product is used to control the disease organisms associated with pigeons and other pest birds (including starlings, sparrows and gulls). It is intended for use by persons who might come into contact with birds' droppings, nesting materials, feathers, or who might work in areas where birds roost or nest.

Killgerm Chemicals Ltd., P.O. Box 2, Ossett, W. Yorks. WF5 9NA.
